

**Instructions:**

1. Click on File -> Make a copy

**Include your IPO Chart with your code in Eclipse IDE:** We will discuss and demonstrate this in the computer lab.

## **IPO CHART**

<b>Program name:</b>	<b>Chap4exercise1</b>	
<b>INPUT</b>	<b>PROCESS</b>	<b>OUTPUT</b>
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
The user will input the number of copies they would like printed.	The program records the given number and matches that to different ranges with different correlating prices. It will then multiply the number of copies with that correlating price to calculate the final total.	The user will see: "Each copy costs \$X." "Your total is \$X.". The program will then restart.
